

Ultraflex specialty materials serve as a unique offering to the printing industry and can be very profitable. We have hand-picked these particular specialty products so that our clients can differentiate themselves from their competition. Our specialty materials work with solvent, eco-solvent, UV and Latex printers. These specialty materials come in a variety of thicknesses and sizes to meet your specific application requirements.

FabriTac®

FabriTac® is a removable adhesive fabric that can be mounted to any surface and repositioned countless times while retaining its adhesion without leaving a residue. FabriTac's unique coating is quick drying, water resistant, and provides superb image quality, color gamut and resolution with Latex, solvent, and UV inks. FabriTac's excellent white point and unique opaque properties prevent translucency problems associated with comparable products. Available face-out in 42" - 60" widths.

AquaFlex™

AquaFlex is a solvent, Latex and UV printable substrate designed for underwater branding and advertising for pools, ponds, various water features and aquascapes. To protect the inks underwater, UV liquid lamination is recommended. Once printed, AquaFlex can be positioned easily either by hand or with a pool brush with no need to drain the water. This product is engineered to lay flat and stay in position without the use of tape or adhesive. AquaFlex is made in the USA and is also recyclable. The blue backside of AquaFlex is made from recycled post-industrial pool liner. AquaFlex is available in 63" wide face-out rolls.

FloorFlex® Digital

FloorFlex Digital is a textured, 42 oz printable floor substrate that is suitable for Latex and UV printers. This lay flat material is engineered with a certified non-slip surface and a latex padded backing. It is ideal for indoor use but may be used outdoors for short durations. Recommended applications for FloorFlex include corporate lobbies, waiting areas, foyers, tradeshow booth floor graphics, catwalks and various types of promotional events. Available face-out in 78" and 126" wide rolls.

UltraCarpet® Extra

UltraCarpet Extra is a white tufted pile carpet especially made for Latex, solvent, eco-solvent, Latex and UV inkjet printing. Ink will not scratch off and drying time is minimal. It is best suited for indoor, digitally printed carpet or doormats. Ultra Carpet Extra is engineered for indoor use but can be used outdoors for short durations and is ideal for use in corporate lobbies, waiting areas, foyers, tradeshow booths and floor graphics. Available in 71" - 196" widths.

Wallsapes Wallcovering

Wallsapes are quality, durable, flexible materials for use as wall-covering or upscale banner applications for UV, solvent and screen printing. Wallsapes wallcovering can be installed using most commercial types of adhesives or can be sewn or grommited. Wallsapes also meet ASTM E-84-03 standards for Class A, Type II wallcovering.

Ultraflex stocks four embossments; Suede, Stardust, Matte and Bali Hai with numerous other embossments available by special order. Wallsapes are available in standard 54".

Artex® Canvas

Artex Canvas is a light-weight; extremely strong and flexible canvas substrate. Artex Canvas is a high-end indoor sign and banner material and is very easy and beautiful to print on with eco-solvent, solvent, Latex, UV or screen printing. Unlike many other canvas products Artex can be finished/welded with ease. This product can also be printed on its reverse side for an optional duller finish. Available widths range from 54" - 196".

UltraVision® Window Perf 6040 UV

UltraVision Window Perf 6040 UV is a perforated white gloss calendared graphic film with a black back and is ideally used for exterior mounted exciting two-way window advertisement applications as seen in store/building windows. UltraVision 6040 has a 40% open area for optimal two way viewing with quality imaging. UltraVision has a special dual release liner allowing this product to be printed with solvent, eco-solvent or UV inks. Available widths are 39" & 54".

Seaming Tape

Non- Adhesive Seaming Tape is designed to assist in creating a stronger bond when finishing PVC vinyl with heat welding (hot air, hot wedge) or high frequency(RF) welding equipment. Its flexibility, strength and high transparency make it ideal for joining graphics together. It is available in 3 different widths 1", 1.5" and 2" on 300' long rolls.
